Gene Information	
Gene Official Full Name	MAD2L1 binding proteinprovided by HGNC
Also known as	CMT2; p31comet
Gene Description	The protein encoded by this gene was identified as a binding protein of the MAD2 mitotic arrest deficient-like 1 (MAD2/MAD2L1). MAD2 is a key component of the spindle checkpoint that delays the onset of anaphase until all the kinetochores are attached to the spindle. This protein may interact with the spindle checkpoint and coordinate cell cycle events in late mitosis. Alternatively spliced transcript variants encoding distinct isoforms have been observed. Expression	Ubiquitous expression in bone marrow (RPKM 14.5), duodenum (RPKM 8.6) and 25 other tissues See more
