Gene Information	
Gene Official Full Name	carboxypeptidase Zprovided by HGNC
Gene Description	This gene encodes a member of the metallocarboxypeptidase family. This enzyme displays carboxypeptidase activity towards substrates with basic C-terminal residues. It is most active at neutral pH and is inhibited by active site-directed inhibitors of metallocarboxypeptidases. Alternative splicing in the coding region results in multiple transcript variants encoding different isoforms. [provided by RefSeq, Jul 2008]
Expression	Biased expression in ovary (RPKM 47.9), placenta (RPKM 26.8) and 8 other tissues See more
