Gene Information	
Gene Official Full Name	trophininprovided by HGNC
Also known as	MAGED3; MAGE-d3
Gene Description	This gene encodes a membrane protein that mediates cell adhesion between trophoblastic cells and the epithelial cells of the endometrium. The encoded protein participates in cell signalling during embryo implantation, and may also be involved in cancer formation. This gene is located near several other closely related genes on chromosome X. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Sep 2012]
Expression	Broad expression in ovary (RPKM 9.7), brain (RPKM 9.7) and 20 other tissues See more
