Gene Information	
Gene Official Full Name	sortilin 1provided by HGNC
Also known as	NT3; Gp95; NTR3; LDLCQ6
Gene Description	This gene encodes a member of the VPS10-related sortilin family of proteins. The encoded preproprotein is proteolytically processed by furin to generate the mature receptor. This receptor plays a role in the trafficking of different proteins to either the cell surface, or subcellular compartments such as lysosomes and endosomes. Expression levels of this gene may influence the risk of myocardial infarction in human patients. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Oct 2015]
Expression	Broad expression in brain (RPKM 47.1), testis (RPKM 30.3) and 22 other tissues See more
