Gene Information	
Gene Official Full Name	serpin family A member 5provided by HGNC
Also known as	PCI; PAI3; PAI-3; PCI-B; PROCI; PLANH3
Gene Description	The protein encoded by this gene is a member of the serpin family of proteins, a group of proteins that inhibit serine proteases. This gene is one in a cluster of serpin genes located on the q arm of chromosome 14. This family member is a glycoprotein that can inhibit several serine proteases, including protein C and various plasminogen activators and kallikreins, and it thus plays diverse roles in hemostasis and thrombosis in multiple organs.
