Gene Information	
Gene Official Full Name	RIO kinase 3provided by HGNC
Also known as	SUDD
Gene Description	This gene was first identified by the similarity of its product to the Aspergillus nidulans SUDD protein. This gene is now recognized as a member of the right open reading frame (RIO) kinase gene family. This gene encodes a serine/threonine kinase that localizes to the cytoplasm and plays a role in the processing of the pre-40 S ribosomal subunit. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Jan 2017]
Expression	Ubiquitous expression in bone marrow (RPKM 81.4), esophagus (RPKM 38.1) and 24 other tissues See more
