Gene Information	
Gene Official Full Name	queuine tRNA-ribosyltransferase accessory subunit 2 provided by HGNC
Also known as	QTRTD1
Gene Description	This gene encodes a subunit of tRNA-guanine transglycosylase. tRNA-guanine transglycosylase is a heterodimeric enzyme complex that plays a critical role in tRNA modification by synthesizing the 7-deazaguanosine queuosine, which is found in tRNAs that code for asparagine, aspartic acid, histidine, and tyrosine. The encoded protein may play a role in the queuosine 5'-monophosphate salvage pathway. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene. Expression	Ubiquitous expression in lymph node (RPKM 5.0), spleen (RPKM 4.9) and 25 other tissues See more
