Gene Information	
Gene Official Full Name	natural killer cell triggering receptorprovided by HGNC
Also known as	p104; CypNK
Gene Description	This gene encodes a membrane-anchored protein with a hydrophobic amino terminal domain and a cyclophilin-like PPlase domain. It is present on the surface of natural killer cells and facilitates their binding to targets. Its expression is regulated by IL2 activation of the cells. [provided by RefSeq, Jul 2008]
Expression	Ubiquitous expression in bone marrow (RPKM 22.3), skin (RPKM 14.4) and 25 other tissues See more
