Gene Information	
Gene Official Full Name	transcription elongation factor A like 9provided by HGNC
Also known as	WBP5; WEX6
Gene Description	The globular WW domain is composed of 38 to 40 semiconserved amino acids shared by proteins of diverse functions including structural, regulatory, and signaling proteins. The domain is involved in mediating protein-protein interactions through the binding of polyproline ligands. This gene encodes a WW domain binding protein. This gene also encodes a domain with similarity to the transcription elongation factor A, SII-related family. Alternative splicing results in multiple transcript variants encoding a single isoform. Expression	Ubiquitous expression in placenta (RPKM 88.8), ovary (RPKM 84.9) and 23 other tissues See more
