

HIVEP2 Knockout cell line (HEK293)

Catalog Number: KO03641

Product Information	
Product Name	HIVEP2 Knockout cell line (HEK293)
specification	1*10 ⁶
Storage and transportation	Dry ice preservation/T25 live cell transportation.
Cell morphology	Epithelioid, adherent cell
Passage ratio	1:3~1:6
species	Human
Gene	HIVEP2
Gene ID	3097
Build method	Electric rotation method / virus method
Mycoplasma testing	Negative
Cultivation system	90%DMEM+10% FBS
Parental Cell Line	HEK293
Quality Control	Genotype: HIVEP2 Knockout cell line (HEK293) >95% viability before freezing. All cells were tested and found to be free of bacterial, viruses, mycoplasma and other toxins.

Gene Information	
Gene Official Full Name	HIVEP zinc finger 2 provided by HGNC
Also known as	SHN2; ZAS2; MBP-2; MIBP1; MRD43; ZNF40B; HIV-EP2
Gene Description	This gene encodes a member of a family of closely related, large, zinc finger-containing transcription factors. The encoded protein regulates transcription by binding to regulatory regions of various cellular and viral genes that maybe involved in growth, development and metastasis. The protein contains the ZAS domain comprised of two widely separated regions of zinc finger motifs, a stretch of highly acidic amino acids and a serine/threonine-rich sequence. [provided by RefSeq, Nov 2012]
Expression	Ubiquitous expression in brain (RPKM 14.4), ovary (RPKM 8.2) and 25 other tissues See more
