Gene Information	
Gene Official Full Name	WASP family member 3provided by HGNC
Also known as	SCAR3; WAVE3; Brush-1
Gene Description	This gene encodes a member of the Wiskott-Aldrich syndrome protein family. The gene product is a protein that forms a multiprotein complex that links receptor kinases and actin. Binding to actin occurs through a C-terminal verprolin homology domain in all family members. The multiprotein complex serves to transduce signals that involve changes in cell shape, motility or function. A pseudogene of this gene have been defined on chromosome 6. Alternative splicing results in multiple transcript variants [provided by RefSeq, May 2014]
Expression	Broad expression in brain (RPKM 34.0), fat (RPKM 12.7) and 15 other tissues See more
