Gene Information	
Gene Official Full Name	argonaute RISC catalytic component 3provided by HGNC
Also known as	EIF2C3
Gene Description	This gene encodes a member of the Argonaute family of proteins which play a role in RNA interference. The encoded protein is highly basic, contains a PAZ domain and a PIWI domain, and may play a role in short-interfering-RNA-mediated gene silencing. This gene is located on chromosome 1 in a tandem cluster of closely related family members including argonaute 4 and eukaryotic translation initiation factor 2C, 1. Two transcript variants encoding distinct isoforms have been identified for this gene. [provided by RefSeq, Jul 2008]
Expression	Ubiquitous expression in skin (RPKM 1.4), testis (RPKM 1.4) and 25 other tissues See more
