Gene Information	
Gene Official Full Name	G protein-coupled receptor kinase 5 provided by HGNC
Also known as	GPRK5; FP2025
Gene Description	This gene encodes a member of the guanine nucleotide-binding protein (G protein)-coupled receptor kinase subfamily of the Ser/Thr protein kinase family. The protein phosphorylates the activated forms of G protein-coupled receptors thus initiating their deactivation. It has also been shown to play a role in regulating the motility of polymorphonuclear leukocytes (PMNs). [provided by RefSeq, Jul 2008]
Expression	Ubiquitous expression in lung (RPKM 30.9), spleen (RPKM 17.1) and 23 other tissues See more
