Gene Information	
Gene Official Full Name	A-kinase anchoring protein 7provided by HGNC
Also known as	AKAP15; AKAP18
Gene Description	This gene encodes a member of the A-kinase anchoring protein (AKAP) family, a group of functionally related proteins that bind to a regulatory subunit (RII) of cAMP-dependent protein kinase A (PKA) and target the enzyme to specific subcellular compartments. AKAPs have a common RII-binding domain, but contain different targeting motifs responsible for directing PKA to distinct intracellular locations. Three alternatively spliced transcript variants encoding different isoforms have been described.[provided by RefSeq, Apr 2011]
Expression	Broad expression in adrenal (RPKM 12.1), duodenum (RPKM 4.2) and 23 other tissues See more
