Gene Information	
Gene Official Full Name	serpin family F member 2provided by HGNC
Also known as	AAP; API; PLI; A2AP; alpha2AP; ALPHA-2-PI
Gene Description	This gene encodes a member of the serpin family of serine protease inhibitors. The protein is a major inhibitor of plasmin, which degrades fibrin and various other proteins. Consequently, the proper function of this gene has a major role in regulating the blood clotting pathway. Mutations in this gene result in alpha-2-plasmin inhibitor deficiency, which is characterized by severe hemorrhagic diathesis. Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Sep 2009]
Expression	Biased expression in liver (RPKM 275.1) and kidney (RPKM 42.8) See more
