Gene Information	
Gene Official Full Name	ring finger protein 4provided by HGNC
Also known as	SLX5; SNURF; RES4-26
Gene Description	The protein encoded by this gene contains a RING finger motif and acts as a transcription regulator. This protein has been shown to interact with, and inhibit the activity of, TRPS1, a transcription suppressor of GATA-mediated transcription. Transcription repressor ZNF278/PATZ is found to interact with this protein, and thus reduce the enhancement of androgen receptor-dependent transcription mediated by this protein. Studies of the mouse and rat counterparts suggested a role of this protein in spermatogenesis. A pseudogene of this gene is found on chromosome 1.[provided by RefSeq, Jul 2010]
Expression	Ubiquitous expression in lymph node (RPKM 20.6), testis (RPKM 19.4) and 25 other tissues See more
