Gene Information	
Gene Official Full Name	synaptojanin 2provided by HGNC
Also known as	INPP5H
Gene Description	The gene is a member of the inositol-polyphosphate 5-phosphatase family. The encoded protein interacts with the ras-related C3 botulinum toxin substrate 1, which causes translocation of the encoded protein to the plasma membrane where it inhibits clathrin-mediated endocytosis. Alternative splicing results in multiple transcript variants. [provided by RefSeq, May 2010]
Expression	Ubiquitous expression in brain (RPKM 8.6), colon (RPKM 3.7) and 25 other tissues See more
