Gene Information	
Gene Official Full Name	netrin 1provided by HGNC
Also known as	NET1; MRMV4; NTN1L
Gene Description	Netrin is included in a family of laminin-related secreted proteins. The function of this gene has not yet been defined; however, netrin is thought to be involved in axon guidance and cell migration during development. Mutations and loss of expression of netrin suggest that variation in netrin may be involved in cancer development. [provided by RefSeq, Jul 2008]
Expression	Broad expression in heart (RPKM 20.8), esophagus (RPKM 16.8) and 17 other tissues See more
