Gene Information	
Gene Official Full Name	Rho associated coiled-coil containing protein kinase 2 provided by HGNC
Also known as	ROCK-II
Gene Description	The protein encoded by this gene is a serine/threonine kinase that regulates cytokinesis, smooth muscle contraction, the formation of actin stress fibers and focal adhesions, and the activation of the c-fos serum response element. This protein, which is an isozyme of ROCK1 is a target for the small GTPase Rho. [provided by RefSeq, Jul 2008]
Expression	Ubiquitous expression in fat (RPKM 15.2), colon (RPKM 13.4) and 25 other tissues See more
