Gene Information	
Gene Official Full Name	calcium/calmodulin dependent protein kinase II deltaprovided by HGNC
Also known as	CAMKD
Gene Description	The product of this gene belongs to the serine/threonine protein kinase family and to the Ca(2+)/calmodulin-dependent protein kinase subfamily. Calcium signaling is crucial for several aspects of plasticity at glutamatergic synapses. In mammalian cells, the enzyme is composed of four different chains: alpha, beta, gamma, and delta. The product of this gene is a delta chain. Alternative splicing results in multiple transcript variants encoding distinct isoforms. Distinct isoforms of this chain have different expression patterns.[provided by RefSeq, Nov 2008]
Expression	Ubiquitous expression in heart (RPKM 23.1), brain (RPKM 14.9) and 24 other tissues See more
