Gene Information	
Gene Official Full Name	WD repeat domain, phosphoinositide interacting 1 provided by HGNC
Also known as	ATG18; ATG18A; WIPI49
Gene Description	This gene encodes a WD40 repeat protein. Members of the WD40 repeat family are key components of many essential biologic functions. They regulate the assembly of multiprotein complexes by presenting a beta-propeller platform for simultaneous and reversible protein-protein interactions. Members of the WIPI subfamily of WD40 repeat proteins have a 7-bladed propeller structure and contain a conserved motif for interaction with phospholipids. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Mar 2016]
Expression	Ubiquitous expression in placenta (RPKM 11.9), heart (RPKM 11.3) and 25 other tissues See more
