Gene Information	
Gene Official Full Name	PDZ and LIM domain 2provided by HGNC
Also known as	SLIM; MYSTIQUE
Gene Description	This gene encodes a member of the ALP subfamily of PDZ-LIM domain proteins. The encoded protein suppresses anchorage-dependent growth and promotes cell migration and adhesion through interactions with the actin cytoskeleton via the PDZ domain. The encoded protein is also a putative tumor suppressor protein, and decreased expression of this gene is associated with several malignancies including breast cancer and adult T-cell leukemia. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene. [provided by RefSeq, Oct 2011]
Expression	Broad expression in spleen (RPKM 22.4), lung (RPKM 9.5) and 21 other tissues See more
