

## Boc-allyl-Gly-OH (dicyclohexylammonium) salt

**Synonym:** (S)-2-(Boc-amino)-4-pentenoic acid (dicyclohexylammonium) salt, Boc-L-2-allylglycine (dicyclohexylammonium) salt

**Catalog Number:** UD-0404

**Product Size:** 250 mg

**Price:** [Online Inquiry](#)

| CAS Number  | MDL Number   | Molecular Formula   | Molecular Weight |
|-------------|--------------|---------------------|------------------|
| 143979-15-1 | MFCD01321013 | C10H17NO4 · C12H23N | 396.56           |

| Properties    |                                                                                                                                                             |
|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Form          | Powder                                                                                                                                                      |
| Color         | Colorless to white                                                                                                                                          |
