Gene Information	
Gene Official Full Name	IGF like family member 1provided by HGNC
Also known as	UNQ644; APRG644
Gene Description	The protein encoded by this gene is a member of the insulin-like growth factor family of signaling molecules. The encoded protein is synthesized as a precursor protein and is proteolytically cleaved to form a secreted mature peptide. The mature peptide binds to a receptor, which in mouse was found on the cell surface of T cells. Increased expression of this gene may be linked to psoriasis. [provided by RefSeq, Aug 2016]
Expression	Restricted expression toward esophagus (RPKM 30.9) See more
