Gene Information	
Gene Official Full Name	fructosamine 3 kinaseprovided by HGNC
Gene Description	A high concentration of glucose can result in non-enzymatic oxidation of proteins by reaction of glucose and lysine residues (glycation). Proteins modified in this way, fructosamines, are less active or functional. This gene encodes an enzyme which catalyzes the phosphorylation of fructosamines which may result in deglycation. [provided by RefSeq, Feb 2012]
Expression	Broad expression in kidney (RPKM 47.7), brain (RPKM 22.0) and 20 other tissues See more
