Gene Information

Gene Official Full Name	DENN domain containing 1Cprovided by HGNC
Also known as	FAM31C
Gene Description	The protein encoded by this gene functions as a guanine nucleotide exchange factor for the early endosomal small GTPase RAB35, which regulates endosomal membrane trafficking and is involved in actin polymerization. The encoded protein activates RAB35 by promoting the exchange of RAB35-bound GDP for GTP. This gene may play a role in linking RAB35 activation with the clathrin machinery. [provided by RefSeq, May 2017]
Expression	Broad expression in lymph node (RPKM 22.3), spleen (RPKM 19.6) and 19 other tissues See more
