Gene Information	
Gene Official Full Name	actin filament associated protein 1provided by HGNC
Also known as	AFAP; AFAP110; AFAP-110
Gene Description	The protein encoded by this gene is a Src binding partner. It may represent a potential modulator of actin filament integrity in response to cellular signals, and may function as an adaptor protein by linking Src family members and/or other signaling proteins to actin filaments. Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Aug 2008]
Expression	Ubiquitous expression in endometrium (RPKM 8.4), placenta (RPKM 6.8) and 24 other tissues See more
