Gene Information	
Gene Official Full Name	limb development membrane protein 1provided by HGNC
Also known as	LSS; TPT; ZRS; ACHP; PPD2; THYP; DIF14; TPTPS; C7orf2
Gene Description	<p>This gene encodes a member of the LMBR1-like membrane protein family. Another member of this protein family has been shown to be a lipocalin transmembrane receptor. A highly conserved, cis-acting regulatory module for the sonic hedgehog gene is located within an intron of this gene. Consequently, disruption of this genic region can alter sonic hedgehog expression and affect limb patterning, but it is not known if this gene functions directly in limb development. Mutations and chromosomal deletions and rearrangements in this genic region are associated with acheiropody and preaxial polydactyly, which likely result from altered sonic hedgehog expression.
