Gene Information	
Gene Official Full Name	coproporphyrinogen oxidase provided by HGNC
Also known as	COX; CPO; CPX; HCP; HARPO
Gene Description	The protein encoded by this gene is the sixth enzyme of the heme biosynthetic pathway. The encoded enzyme is soluble and found in the intermembrane space of mitochondria. This enzyme catalyzes the stepwise oxidative decarboxylation of coproporphyrinogen III to protoporphyrinogen IX, a precursor of heme. Defects in this gene are a cause of hereditary coproporphyria (HCP). [provided by RefSeq, Oct 2009]
Expression	Ubiquitous expression in bone marrow (RPKM 5.0), liver (RPKM 3.1) and 24 other tissues See more
