Gene Information	
Gene Official Full Name	TP53 induced glycolysis regulatory phosphatase provided by HGNC
Also known as	FR2BP; C12orf5
Gene Description	This gene is regulated as part of the p53 tumor suppressor pathway and encodes a protein with sequence similarity to the bisphosphate domain of the glycolytic enzyme that degrades fructose-2,6-bisphosphate. The protein functions by blocking glycolysis and directing the pathway into the pentose phosphate shunt. Expression of this protein also protects cells from DNA damaging reactive oxygen species and provides some protection from DNA damage-induced apoptosis. The 12p13.32 region that includes this gene is paralogous to the 11q13.3 region. [provided by RefSeq, Jul 2008]
Expression	Ubiquitous expression in urinary bladder (RPKM 2.3), colon (RPKM 2.2) and 24 other tissues See more
