

Cholesterol Quantitation Kit

Catalog Number: EK0046

Product Size: 1 KT

Price: [Online Inquiry](#)

Product Information	
Storage Temperature	-20°C
Shipping Conditions	Gel ice pack.
Detection Method	Colorimetric or fluorometric.
Usage	Sufficient for 100 colorimetric or fluorometric tests.
Description	Cholesterol is primarily produced in the liver. It is an important component of mammalian cell membranes and is involved in cell signaling, intracellular transport and the maintenance of membrane fluidity. Cholesterol Quantitation Kit can be used to measure the level of total serum cholesterol in various biological samples, including cell and tissue culture samples, serum, plasma, urine and others.
