Gene Information	
Gene Official Full Name	ubiquitin protein ligase E3 component n-recognin 1provided by HGNC
Also known as	JBS
Gene Description	The N-end rule pathway is one proteolytic pathway of the ubiquitin system. The recognition component of this pathway, encoded by this gene, binds to a destabilizing N-terminal residue of a substrate protein and participates in the formation of a substrate-linked multiubiquitin chain. This leads to the eventual degradation of the substrate protein. The protein described in this record has a RING-type zinc finger and a UBR-type zinc finger. Mutations in this gene have been associated with Johanson-Blizzard syndrome. [provided by RefSeq, Jul 2008]
Expression	Ubiquitous expression in thyroid (RPKM 7.4), endometrium (RPKM 6.3) and 25 other tissues See more
