Gene Information	
Gene Official Full Name	toll interacting proteinprovided by HGNC
Also known as	IL-1RAcPIP
Gene Description	This gene encodes a ubiquitin-binding protein that interacts with several Toll-like receptor (TLR) signaling cascade components. The encoded protein regulates inflammatory signaling and is involved in interleukin-1 receptor trafficking and in the turnover of IL1R-associated kinase. Several transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Jan 2016]
Expression	Ubiquitous expression in brain (RPKM 31.0), testis (RPKM 17.9) and 25 other tissues See more
