Gene Information	
Gene Official Full Name	pantothenate kinase 1provided by HGNC
Also known as	PANK
Gene Description	This gene encodes a member of the pantothenate kinase family. Pantothenate kinases are key regulatory enzymes in the biosynthesis of coenzyme A (CoA). The encoded protein catalyzes the first and rate-limiting enzymatic reaction in CoA biosynthesis and is regulated by CoA through feedback inhibition. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene. This gene and an intronic miRNA on the same strand are co-regulated by the tumor suppressor p53 (see PMID 20833636). [provided by RefSeq, Apr 2011]
Expression	Broad expression in liver (RPKM 8.6), kidney (RPKM 7.3) and 16 other tissues See more
