Gene Information	
Gene Official Full Name	BBSome interacting protein 1 provided by HGNC
Also known as	BBS18; BBIP10; bA348N5.3; NCRNA00081
Gene Description	This gene encodes one of eight proteins that form the BBSome complex and is essential for its assembly. The BBSome complex is involved in trafficking signal receptors to and from the cilia. Mutations in this gene result in Bardet-Biedl syndrome 18. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Oct 2014]
Expression	Broad expression in testis (RPKM 16.1), brain (RPKM 5.2) and 23 other tissues See more
