

## PIGO Knockout cell line (A549)

Catalog Number: KO24686

| Product Information        |  |
|----------------------------|--|
| Product Name               | PIGO Knockout cell line (A549)   |
| specification              | 1*10^6   |
| Storage and transportation | Dry ice preservation/T25 live cell transportation.   |
| Cell morphology            | Epithelioid, adherent cell   |
| Passage ratio              | 1:3~1:4  |
| species                    | Human  |
| Gene                       | PIGO   |
| Gene ID                    | 84720  |
| Build method               | Electric rotation method / virus method  |
| Mycoplasma testing         | Negative   |
| Cultivation system         | 90% F12K+10% FBS   |
| Parental Cell Line         | A549   |
| Quality Control            | Genotype: PIGO Knockout cell line (A549) >95% viability before freezing. All cells were tested and found to be free of bacterial, viruses,mycoplasma and other toxins. |

| Gene Information        |  |
|-------------------------|--|
| Gene Official Full Name | phosphatidylinositol glycan anchor biosynthesis class Oprovided by HGNC  |
| Also known as           | HPMRS2   |
| Gene Description        | This gene encodes a protein that is involved in glycosylphosphatidylinositol (GPI)-anchor biosynthesis. The GPI-anchor is a glycolipid which contains three mannose molecules in its core backbone. The GPI-anchor is found on many blood cells and serves to anchor proteins to the cell surface. This protein is involved in the transfer of ethanolaminephosphate (EtNP) to the third mannose in GPI. At least three alternatively spliced transcripts encoding two distinct isoforms have been found for this gene. [provided by RefSeq, Jan 2011] |
| Expression              | Ubiquitous expression in thyroid (RPKM 6.9), testis (RPKM 4.4) and 25 other tissues See more   |
