Gene Information

Gene Official Full Name	HORMA domain containing 1 provided by HGNC
Also known as	CT46; NOHMA
Gene Description	This gene encodes a HORMA domain-containing protein. HORMA domains are involved in chromatin binding and play a role in cell cycle regulation. The encoded protein may play a role in meiosis, and expression of this gene is a potential marker for cancer. A pseudogene of this gene is located on the long arm of chromosome 6. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene. [provided by RefSeq, Dec 2010]
Expression	Restricted expression toward testis (RPKM 50.3) See more
