Gene Information

Gene Official Full Name	LIM and cysteine rich domains 1provided by HGNC
Gene Description	This gene encodes a member of the LIM-domain family of zinc finger proteins. The encoded protein contains an N-terminal cysteine-rich domain and two C-terminal LIM domains. The presence of LIM domains suggests involvement in protein-protein interactions. The protein may act as a co-regulator of transcription along with other transcription factors. Alternate splicing results in multiple transcript variants of this gene. [provided by RefSeq, May 2013]
Expression	Broad expression in lung (RPKM 21.9), fat (RPKM 21.1) and 24 other tissues See more
