Gene Information	
Gene Official Full Name	DNA polymerase lambda provided by HGNC
Also known as	BETAN; POLKAPPA
Gene Description	This gene encodes a DNA polymerase. DNA polymerases catalyze DNA-template-directed extension of the 3'-end of a DNA strand. This particular polymerase, which is a member of the X family of DNA polymerases, likely plays a role in non-homologous end joining and other DNA repair processes. Alternatively spliced transcript variants have been described. [provided by RefSeq, Mar 2010]
Expression	Ubiquitous expression in testis (RPKM 14.9), ovary (RPKM 7.3) and 25 other tissues See more
