Gene Information	
Gene Official Full Name	glutaminase 2provided by HGNC
Also known as	GA; GLS; LGA; hLGA
Gene Description	The protein encoded by this gene is a mitochondrial phosphate-activated glutaminase that catalyzes the hydrolysis of glutamine to stoichiometric amounts of glutamate and ammonia. Originally thought to be liver-specific, this protein has been found in other tissues as well. Alternative splicing results in multiple transcript variants that encode different isoforms. [provided by RefSeq, Jul 2013]
Expression	Biased expression in liver (RPKM 39.1), brain (RPKM 4.2) and 2 other tissues See more
