Gene Information	
Gene Official Full Name	sorting nexin 5provided by HGNC
Gene Description	This gene encodes a member of the sorting nexin family. Members of this family contain a phox (PX) domain, which is a phosphoinositide binding domain, and are involved in intracellular trafficking. This protein functions in endosomal sorting, the phosphoinositide-signaling pathway, and macropinocytosis. This gene may play a role in the tumorigenesis of papillary thyroid carcinoma. Alternative splicing results in multiple transcript variants encoding different isoforms. [provided by RefSeq, Sep 2013]
Expression	Ubiquitous expression in thyroid (RPKM 76.1), kidney (RPKM 52.7) and 24 other tissues See more
