Gene Information	
Gene Official Full Name	anaphase promoting complex subunit 13 provided by HGNC
Also known as	SWM1; APC13
Gene Description	This gene encodes a component of the anaphase promoting complex, a large ubiquitin-protein ligase that controls cell cycle progression by regulating the degradation of cell cycle regulators such as B-type cyclins. The encoded protein is evolutionarily conserved and is required for the integrity and ubiquitin ligase activity of the anaphase promoting complex. Pseudogenes and splice variants have been found for this gene; however, the biological validity of some of the splice variants has not been determined. [provided by RefSeq, Nov 2008]
Expression	Ubiquitous expression in thyroid (RPKM 36.9), kidney (RPKM 32.9) and 25 other tissues See more
