Gene Information	
Gene Official Full Name	FKBP prolyl isomerase 8provided by HGNC
Also known as	FKBP38; FKBP α 38
Gene Description	The protein encoded by this gene is a member of the immunophilin protein family, which play a role in immunoregulation and basic cellular processes involving protein folding and trafficking. Unlike the other members of the family, this encoded protein does not seem to have PPIase/rotamase activity. It may have a role in neurons associated with memory function. [provided by RefSeq, Jul 2008]
Expression	Ubiquitous expression in testis (RPKM 106.8), brain (RPKM 101.5) and 25 other tissues See more
