| Gene Description        | Enables identical protein binding activity and transcription coregulator binding activity. Predicted to be involved in regulation of DNA-templated transcription. Located in pericentric heterochromatin. [provided by Alliance of Genome Resources, Apr 2025] |
| Expression              | Ubiquitous expression in ovary (RPKM 1.9), kidney (RPKM 1.8) and 25 other tissues See more                                                                                                                                                                     |
