Gene Information	
Gene Official Full Name	zinc finger MYND-type containing 11provided by HGNC
Also known as	BS69; BRAM1; MRD30
Gene Description	The protein encoded by this gene was first identified by its ability to bind the adenovirus E1A protein. The protein localizes to the nucleus. It functions as a transcriptional repressor, and expression of E1A inhibits this repression. Alternatively spliced transcript variants encoding different isoforms have been identified. [provided by RefSeq, Jul 2008]
Expression	Ubiquitous expression in thyroid (RPKM 38.3), brain (RPKM 25.5) and 25 other tissues See more
