Gene Information	
Gene Official Full Name	dehydrogenase/reductase 2provided by HGNC
Also known as	HEP27; SDR25C1
Gene Description	This gene encodes a member of the short-chain dehydrogenases/reductases (SDR) family, which has over 46,000 members. Members of this family are enzymes that metabolize many different compounds, such as steroid hormones, prostaglandins, retinoids, lipids and xenobiotics. Alternative promoter use and alternative splicing results in multiple transcript variants. [provided by RefSeq, Feb 2017]
Expression	Biased expression in urinary bladder (RPKM 75.6), salivary gland (RPKM 7.2) and 3 other tissues See more
