Gene Information	
Gene Official Full Name	tripartite motif containing 28provided by HGNC
Also known as	KAP1; TF1B; RNF96; TIF1B; PPP1R157; TIF1beta
Gene Description	The protein encoded by this gene mediates transcriptional control by interaction with the Kruppel-associated box repression domain found in many transcription factors. The protein localizes to the nucleus and is thought to associate with specific chromatin regions. The protein is a member of the tripartite motif family. This tripartite motif includes three zinc-binding domains, a RING, a B-box type 1 and a B-box type 2, and a coiled-coil region. [provided by RefSeq, Jul 2008]
