Gene Information	
Gene Official Full Name	clathrin interactor 1provided by HGNC
Also known as	ENTH; EPN4; EPNR; CLINT
Gene Description	This gene encodes a protein with similarity to the epsin family of endocytic adapter proteins. The encoded protein interacts with clathrin, the adapter protein AP-1 and phosphoinositides. This protein may be involved in the formation of clathrin coated vesicles and trafficking between the trans-Golgi network and endosomes. Mutations in this gene are associated with a susceptibility to schizophrenia and psychotic disorders. Alternate splicing results in multiple transcript variants. [provided by RefSeq, Sep 2010]
Expression	Ubiquitous expression in bone marrow (RPKM 39.0), gall bladder (RPKM 37.4) and 25 other tissues See more
