Gene Information

Gene Official Full Name	nipsnap homolog 1provided by HGNC
Gene Description	This gene encodes a member of the NipSnap family of proteins that may be involved in vesicular transport. A similar protein in mice inhibits the calcium channel TRPV6, and is also localized to the inner mitochondrial membrane where it may play a role in mitochondrial DNA maintenance. A pseudogene of this gene is located on the short arm of chromosome 17. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene. [provided by RefSeq, Feb 2011]
Expression	Ubiquitous expression in liver (RPKM 78.8), kidney (RPKM 57.0) and 24 other tissues See more
