Gene Information	
Gene Official Full Name	translin associated factor Xprovided by HGNC
Also known as	C3PO; TRAX
Gene Description	This gene encodes a protein which specifically interacts with translin, a DNA-binding protein that binds consensus sequences at breakpoint junctions of chromosomal translocations. The encoded protein contains bipartite nuclear targeting sequences that may provide nuclear transport for translin, which lacks any nuclear targeting motifs. [provided by RefSeq, Jul 2008]
Expression	Ubiquitous expression in adrenal (RPKM 19.1), thyroid (RPKM 18.7) and 25 other tissues See more
